

Arseny Artobolevsky

Full-Stack Developer · Founder & CTO

anarchseniq.me

hello@anarchseniq.me · +7 933 911 00 19 · @anarchseniq · Remote ·
github.com/anarchseniq

Developer and founder working across the whole product lifecycle — from architecture and back-end to polished front-end interfaces. I run hiremy.team as an independent studio, build my own products, and take on selected roles in-house.

VENTURES

Founder · CTO — Biznesator

06.2025

AI · Strategy & investment · React · TypeScript · Node · PostgreSQL · LLM · orchestration

- Biznesator is an intelligent platform for strategic and investment engineering. It automates the whole strategy-and-project cycle — from mission and KPIs to business plans and pitch materials — using AI, international standards and verification algorithms.

Founder · CTO — Panoptes

04.2026

OSINT · Digital footprint · OSINT · LLM · NLP · web intelligence

- Panoptes builds products for working with the digital footprint. Its first product, Lume, assembles what a person or company leaves across the open web — hundreds and thousands of sources (search engines, social networks, public registries, media, forums, messengers, code repositories) — into one verified portrait.

STUDIO

hiremy.team

2025

Agency website · Astro · Tailwind · Node · Postgres

The studio's own website. A light, cool-toned landing with services, process, cases and an FAQ, built on Astro.

petvisa

09.2025 – 02.2026

AI · Pet biometrics · Python · ML · Qwen · React · biometrics

petvisa is an AI service that finds lost pets by nose-print biometrics — the print is as unique as a fingerprint. An ML pipeline (quality check → encoding → matching) compares a pet's photo against posts across social networks and classifieds.

hyperline

03.2026 – 05.2026

Website · PIM · Next.js · React · FastAPI · Python · PostgreSQL · CI/CD

Hyperline (RusSKS) is a Russian brand of structured cabling systems. We built the site with a full catalog — copper & optical systems, cabinets, accessories — with product cards, filters, search and price lists.

MOEX

09.2024 – 10.2024

Telegram bots · events · Node · Telegram Bot API · Postgres

Two interactive Telegram bots for Moscow Exchange (MOEX) events. They

withstood very high load — thousands of concurrent participants — let guests win rewards on-site, and worked as lead generators.

EXPERIENCE

Director of Digital Development — RusSKS LLC · Hyperline

05.2026 – Now

Remote · Active

- Came in-house after building their website, migrating the database and shipping a PIM MVP under my own studio — then took the lead.
- Drive the website and catalog, internal tools and a single source of truth for product data.
- Set up processes and automation, connecting engineering with real business goals.

Developer & Project Manager — Verdix Soft LLC

Feb 2024 – Feb 2025

Moscow · On hold

- Wrote the React frontend and Go backend on PostgreSQL — owning integrations, performance and stability.
- As PM, launched a tender platform for cleaning services: a team of 3–7, Agile, specs, testing and user training — all the way to a successful release.
- In 2026 I stepped up as CEO; the project is currently on hold.

Development Department Specialist — TOP Academy (ANO DPO)

Feb 2025 – Jun 2025

Moscow · Completed

- Shipped the subsidiary's informational landing: content structure, cases and project write-ups.
- Designed and implemented UI/UX with a focus on user scenarios and responsiveness across devices.
- Prepared technical and user documentation and localized products into English, Japanese and Chinese.

EDUCATION

BSc — Software Engineering — RTU MIREA

2022 – 2026

“Intelligent decision-support systems (AI)”.

Go Developer — Yandex Courses

2023

Professional Go backend development course.

SKILLS

Languages: Go · Python · TypeScript · JavaScript · C++ · SQL

AI / ML: LLM · RAG · Hugging Face · LangChain · Fine-tuning · PyTorch · NLP · ML pipelines · Computer vision

Frontend: React · Next.js · Astro · Tailwind · HTML · CSS · UI/UX

Backend: Node.js · Express · FastAPI · REST · WebSockets · Prisma · Telegram Bot API

Data & Infrastructure: PostgreSQL · Docker · Kubernetes · Nginx · Caddy · CI/CD · Git · Linux

Management: Agile · Dev management · Product thinking · BPMN · UML · Jira

Spoken languages: English (C1) · Japanese (B1) · Chinese (A2)
